ReCAP® Retail File 11.1

Quick Facts

Sales Data

ReCAP's® enhanced sales estimate is based on a proprietary methodology that calculates an annual sales estimate for each location based on the customer base and density, physical location and competitive environment for each store's trade area. This process is more accurate than conventional estimating methods or retailer interviews, which are subjective, with results that are difficult to replicate consistently. Other methods based on store averages or employee counts have great fluctuations from year to year and are all based on broad industry averages.

Selections

Select the fields and geographic areas that pertain to your business and choose the format that works for you.

Sources

The input sources compiled include, but are not limited to:

- **Business List and Phone Data**
This source includes information on entrepreneurs who have registered new businesses, including sole proprietor and partnership filings.
- **Franchise Circulars**
By using these business publications, we are able to navigate company and industry trends throughout the year. These provide invaluable information about professionals, their expansion plans, partnerships and their specialties.
- **Business Magazines, Newsletters, Newspapers, and other data providers**
Information about business trends, mergers and acquisitions, and financial results makes the database current and fresh.
- **Yellow Pages and White Pages**
A portion of information in the ReCAP product comes from compilation of telephone directories nationwide. Yellow page directory coverage is 100%.
- **Annual Reports, 10Ks and Other SEC Information**
These sources provide accurate, in-depth information about publicly-traded companies including employment figures, sales volume and more.
- **Internet Chain Directories**
Increasing levels of business and government data are available through the web. These range from product and brand information to financial and size of business statistics.
- **Airport Directories**
These provide information on retail and restaurant locations offering services within the commercial airports across the United States.
- **Postal Service Information**
The entire database is verified against the U.S. Postal Service for the National Change of Address (NCOA) database and ZIP+4 standardization. This results in address duplication improvement along with the most current addresses available.
- **Federal, State and Municipal Government Data**
Government agencies provide an abundance of information from current directories, reports and Chambers of Commerce information.
